**SURFACE TREATED STEEL SHEET FOR BATTERY CASE,**  
**BATTERY CASE AND BATTERY USING THE CASE**

***Detailed Action***

1. The amendments filed on November 12, 2010 were received. Applicant has amended claim 23.
2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

***Examiner's Amendment***

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Authorization for this examiner's amendment was given via telephone by Jay Williams of Browdy and Neimark PLLC on November 23, 2010.

The application has been amended as follows:

In claim 23, delete "A surface treated steel sheet for a battery case, comprising:", and add "A battery case comprises a surface treated steel sheet, said surface treated steel comprising:".

In claim 24, delete "The surface treated steel sheet for a battery case", and add "The battery case comprising a surface treated steel sheet".

In claim 25, delete "The surface treated steel sheet for a battery case", and add "The battery case comprising a surface treated steel sheet".

Cancel claims 26-28.

***Claim Rejections - 35 USC § 103***

4. The rejection of claims 23, 24 and 25 under 35 U.S.C. 103(a) as being unpatentable over Hirofumi et al. (US 5,576,113) in view of Omura et al. (JP 02-129395 A) and Younan et al., "Effect of heat treatment on electroless ternary nickel-cobalt-phosphorus alloy", Journal of Applied Electrochemistry, 32:439-446, 2002, is withdrawn because claim 23 was amended as noted above (see Paragraphs 1 and 3).

***Reasons for Allowance***

5. Claims 23, 24 and 25 are allowed.

The following is an examiner's statement of reasons for allowance: The invention of independent claim 23 recites a battery case that includes a surface treated steel sheet composed of a steel sheet with two surfaces where a diffusion layer of nickel-cobalt-phosphorus, with a thickness of 0.1-2  $\mu\text{m}$ , is the uppermost layer on an inner surface of the case; a nickel layer, having a thickness of 0.2-3  $\mu\text{m}$ , is the upper layer at an outer surface of the case; and, an iron-nickel diffusion layer is formed between the nickel-cobalt-phosphorus diffusion layer and steel sheet and between the nickel layer and the steel sheet. The prior art of record, Hirofumi et al., Omura et al. (cited above), Younan et al., Ohumra et al. (US 6,979,515 and US 7,150,939; discussed below), and Sugikawa (US 6,153,027; discussed below), do not teach a battery case with a nickel-cobalt-phosphorus diffusion layer having a thickness of 0.1-2  $\mu\text{m}$  being formed as the uppermost layer on an inner surface of the case.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

6. The following prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Sugikawa (US 6,153,027) teaches a battery-can forming material (Abstract; 5:56-64; Claim 7). Ohmura et al. (US 6,979,515) teaches a battery case employing a steel sheet with iron-nickel diffusion layer as a lower layer, a nickel plating layer as an upper layer on a surface corresponding to an inner surface of the case, an iron-nickel diffusion layer as a lower layer, a nickel layer as an intermediate layer, and a glossy nickel alloy plating layer as an upper layer on a surface corresponding to an outer surface of the case (Abstract). Ohmura et al. (US 7,150,939) teaches a battery container having an inner surface provided with a nickel-phosphorous alloy layer; optionally provided with a nickel-cobalt alloy layer as the lower layer thereof; and, an outer surface of the battery container is preferably provided with a nickel-cobalt alloy layer (Abstract).
